

## CS 240 – Initial Requirements

Rachel Gilligan

9/28/18

I have been put in charge of the Graphical User Interface (GUI) for this project. When a labelled button is selected by a user, the specified action needs to occur. Inputs from users will be sent to appropriate sections of the system to be processed and returned. The GUI should display the correct workout information for the user. User should be able to check off workouts as they are completed. There will need to be responses to user inputs for multiple actions. Clients will expect quick responses to selections with little lag time.
